Data on boats performances that appear on the website (Cranchi® Official Publications) are approximate. The data have actually been acquired at our Marine Test Centre on the Adriatico sea. They refer to the new boat, without anti-fouling, with light load, in optimal environmental conditions, and must be seen simply as a general reference. Factors such as dirt on the hull, the anti-fouling and fuel quality, the flaps, propeller, and engines condition, the water, air, and fuel temperature, the weather and sea conditions, particular load condition, fuel, water, extra equipment, and passengers number can largely influence the performance of any boats, including ours. Data relative to the boats' performance are therefore not a contractual obligation, nor do they carry any sort of guarantee, whether implicit or explicit, of performance on our behalf.
